

# PCOC

palliative care  
outcomes collaboration

The Palliative Care Outcomes Collaboration (PCOC) is a nationally funded program designed to embed clinical assessment tools into routine clinical practice.

PCOC captures clinically meaningful information across a patient's disease trajectory to facilitate improved patient outcomes. This is achieved by:

## Clinical assessment tools

Five standardised and validated tools.

## Education

Suite of education programs.

## National dataset for palliative care

Point of care assessments collected and submitted every six-months.

## Outcome measurement and benchmarking

Sector formed patient outcome measures and associated benchmarks for palliative care services.

## Patient outcome reporting

Reports provided every six-months for participating services, states and nationally.

## National benchmark workshops

Benchmarking groups by service type brought together annually to reflect upon and share patient outcomes.

## Quality improvement

Improvement facilitated through a range of activities.

## Research

Research activities undertaken and assistance provided with data requests and data analysis.

In **January to June 2016** there were **16** specialist palliative care services in **South Australia** that submitted data to **PCOC**.

Of these:

**6** provided care in a hospital or hospice

**10** provided care in the home

Combined, these services provided **2,317** episodes of care to **1,776** patients.

**39.1%** of care occurred in hospitals.

**81.7%** of patients had a malignant diagnosis.

During this period **808** patients died.

Of these, **61.3%** died in hospital.

There are **20** benchmarks. These are:

**1** benchmark on **timeliness of care** that **11** services have met.

**1** benchmark on **responsiveness to urgent needs** that **3** services have met.

**6** benchmarks on **pain management\***

where **9** services have met at least one benchmark.

**9** benchmarks on **symptom management\*** where **13** services have met at least one benchmark.

**3** benchmarks on **family/carer problems\***

where **7** services have met at least one benchmark.

\*some benchmarks are case-mix adjusted.
