## 698 residents were assessed using the Outcomes collection

### Sex Breakdown

### Age Breakdown

80% born in Australia

5% preferred another language

For the 698 residents assessed, there were…

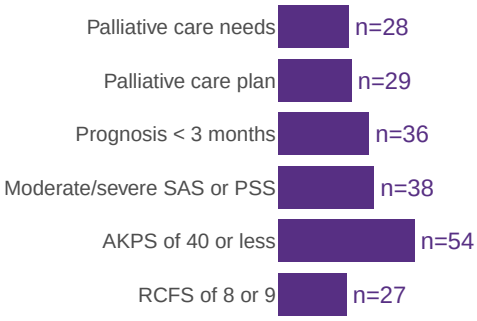

- 2,877 FULL Assessments completed
- 15,393 Daily SAS Assessments completed
- 180 Profile Supplements completed

- 15% of residents had a specialist palliative care consult
- 32% had at least one emergency department presentation
- 29% had at least one unplanned hospitalisation
- 6% of residents had hospital leave

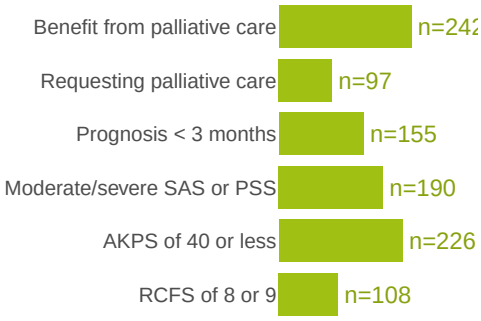

## Critera for entering Outcomes

- 10 were admitted as AN-ACC Class 1
- 7 were admitted from a palliative care unit
- 323 from a Deteriorating Resident Tool
- 77 from Profile Assessments
- 131 In outcomes for unknown reason

### Profile Assessment (n=77)

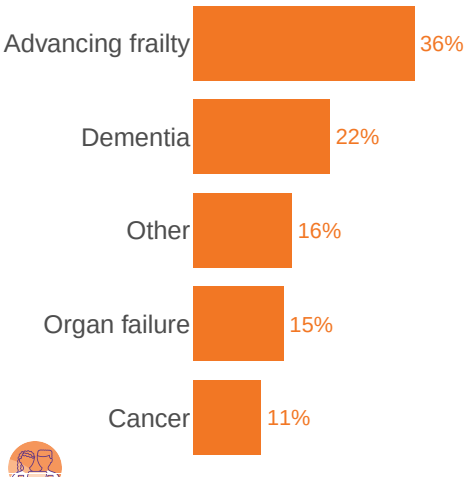

### Deteriorating Resident Tool (n=323)

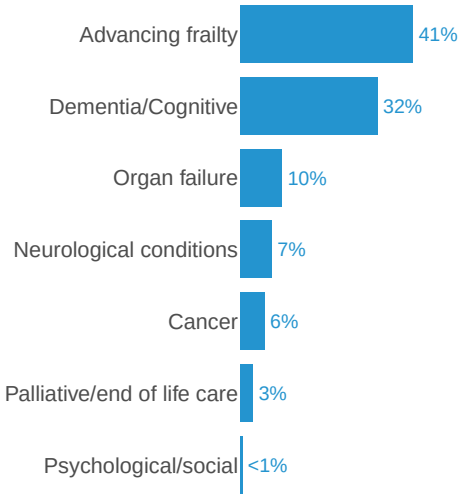

## Care needs and response

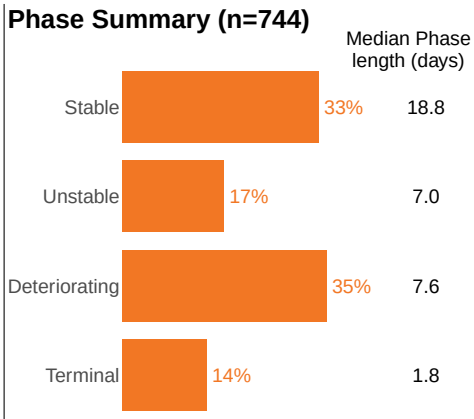

### Principal diagnosis grouped – need for palliative care episode (n=598)

### Diagnostic cluster – main reason for care (n=628)

### Phase Summary (n=744)

- 44 unstable phases were 3 days or less
- 92 terminal phases were 7 days or less
