**Title:**

Self Directed Learning of Mathematics in a One to One Laptop School.

**Abstract:**

The introduction of the one to one laptop program at St Mary Star of the Sea College leads to an excellent opportunity for students to be involved in self-directed learning experiences. In order to prepare students for life experiences in making mathematics relevant for students, the introduction of the laptop program provides an excellent medium for this to occur.

The self-directed learning approach creates a learning environment in which students are responsible for their own learning. The role of the teacher becomes to facilitate learning rather than direct it.
