Notes on Contributors

C. M. Ann Baker has the degrees of B.Sc. and M.Sc. in agriculture from the University of Durham. Her employment has included periods with the Hill Farming Research Organisation, Welsh Plant Breeding Station, and the Ministry of Agriculture, Fisheries and Food in the United Kingdom. She went to the United States on a Fulbright travel grant where she did research on the molecular basis of hybrid vigour and on biochemical markers in egg white and other tissues, in collaboration with her future husband (Clyde Manwell). At present she is a Visiting Research Fellow at the University of Adelaide. Her research interests cover the genetics and evolution of animals in environments altered by humans. She also works on the politics of agriculture and is active in organisations devoted to the defence of academic freedom. Together with her husband she has participated in the analysis of the social structure of science and of universities. She has written a number of research papers, including four major reviews, on egg quality, egg proteins, genetics of protein polymorphisms in the chicken, and molecular variability in domesticated mammals. She is co-author with her husband of Molecular Biology and the Origin of Species.

Jean Buckley-Moran has worked as a journalist and film director. She currently teaches part-time in Technology and Society at the University of New South Wales, and is writing a thesis on industrialisation and innovation in post-World War II Australia.

Richard Davis was born in India in 1935 and educated mainly in Ireland, graduating in history at the University of Dublin. Before coming to Australia he was on the staff of the Queen's University, Belfast, and the University of Otago, Dunedin. He is now Reader in History at the University of Tasmania and has published seven books and fifty articles. Richard Davis is married with two children.

Cheryl Hannah is a committed feminist who has been active in student and worker politics since the mid-1960s. She has an honours degree in political science from the Australian National University and ten years' experience working first with federal politicians and then international relations theorists. She has taught Australian foreign policy to undergraduates and women's studies to high school students. For her the personal is political. She is also fond of her two cats.

Evan Jones is a lecturer in economics at the University of Sydney. His special interests are in the methodology and sociology of the economics profession, and in the structural constraints on capitalist development. He has spent the last ten years trying to escape the clutches of a rigorous education.

Clyde Manwell has the degrees of B.S. and Ph.D. from Stanford University. His employment has included teaching at the University of Utah and the University of Illinois, as well as research fellowships at the Scripps Institution of Oceanography, and at the Marine Biological Laboratory and the National Lending Library of Science and Technology in the United Kingdom. His research interests include comparative biochemistry, population genetics (especially of marine organisms and of domesticated animals), and molecular aspects of pollution. His publications include Molecular Biology and the Origin of Species (with C. M. Ann Baker) and reviews on respiratory transport proteins, on molecular variation in animal populations, on oil and detergent pollution, and on the social structure of science. He is at present Professor of Zoology at the University of Adelaide — a position he was nearly forced to vacate as a consequence of the criticisms he and his wife made of fruit fly spraying in South Australia. As a consequence of first-hand experience, he became active in attempting to protect the right to dissent in academic and scientific institutions.

Brian Martin was born in 1947, received a B.A. from Rice University (Houston, Texas) and a Ph.D. in theoretical physics from Sydney University. He has worked as a research assistant and research associate doing applied mathematics at the Australian National University since 1976. His many technical scientific papers are mainly in the areas of stratospheric modelling, numerical methods, wind power and astrophysics. He also has written widely on the critique of science and technology, nuclear power, war and peace issues, and social action, including the books *The Bias of Science* and *Uprooting War*. He has been active for many years in environmental and peace movements in Canberra, and has played an important role in publicising the issues and organising support in a number of cases of suppression of intellectual dissent.

Val Plumwood has been a social activist, working on a range of environmental issues, especially forestry and nuclear power, since the early 1970s. Her academic background is in philosophy, where she has published numerous papers and books in virtually all areas. She currently teaches social philosophy at Macquarie University. Her political consciousness was considerably raised by the Australian National University suppression attempts (documented in this book) and the years of activism. Both her academic work and activism now have a strongly political, anarchist and feminist orientation.

Cedric Pugh was born in 1938. He read Politics and Economics for his B.A.(Hons.) at the University of Wales, and his masterate and doctorate degrees were in Australian and international housing policy. Dr Pugh has taught in universities and polytechnics in four countries in three continents, living in both democratic and non-democratic societies. He has written a wide range of journal articles, monographs and international textbooks on urban economics, housing policy and public finance. Dr Pugh has been active in environmental and social reformist causes, sometimes acting as media spokesperson. He became interested in human rights issues in his undergraduate work at the University College of Swansea, where he was encouraged by the eminent scholars and authors, the late Frank Stacey and John C. Rees. Frank Stacey wrote extensively on ombudspersons and bills of rights, and John C. Rees had a continual research programme in the ideas of John Stuart Mill. Dr Pugh's candidature for promotion was campaigned in Australia and overseas in response to the South Australian Institute of Technology's policy that its internal critics be prevented from achieving senior status.

Stuart Rees is Professor of Social Work at the University of Sydney. He has worked for several years as a probation officer in London and Vancouver and has taught at universities in Scotland, Canada and the United States. His publications have included Social Work Face to Face and Verdicts on Social Work (published by Edward Arnold) and most recently a research report on family care of disabled children, Disabled Children: Disabling Practices, published by the University of New South Wales Social Welfare Research Centre.

Richard Routley, senior fellow in philosophy at the Australian National University, engages in research in logic and metaphysics as well as environmental philosophy. His work on environmental theory has always been coupled with more practical applications, in the early 1970s to forestry and the comparatively natural environment, more recently to nuclear power and then nuclear war, and now to the transformed environment and especially to agriculture.

Peter W. Sheehan, Professor of Psychology at the University of Queensland, is Chairman of the Australian Research Grants Scheme.

Deborah Smith is a journalist with the National Times, specialising on issues in science and medicine. She has written a number of important stories on academic freedom cases.

Peter Springell has been active in the environmental movement since the early 1970s on a range of issues. He worked in the CSIRO, beginning in 1953, and rose to the position of Principal Research Scientist. Beginning in 1974 he undertook research work and published on environmental topics. The resulting conflict with CSIRO management led to his resignation in 1976.

Frank Stilwell is an associate professor of economics at the University of Sydney. His special interests are in urban and regional studies and in progressive economic policies. His most recent book is Economic Crisis, Cities and Regions (1980).
